Education

University of West London, London | BSc (Hons) Computer Science | 2025–2028
Expected Course Completion: June 2028 | Current Average: 84.8% (First-Class)
Selected Modules: Programming (96%), Algorithms and Data Types (93%), Computer Architecture (87%), Mathematics for Computing (82%), Databases (80%)
Inventure Academy, Bengaluru | 2023–2025
Cambridge International AS & A Levels: Mathematics, Physics, Chemistry, English

AI and Data Projects

DroneMedic — Medical Drone Delivery Prototype | AR26 HackXelerator

- Led a four-person team building an AI-assisted medical delivery prototype; developed the React/TypeScript frontend and integrated a Python/FastAPI backend via REST APIs and WebSockets.
- Built dashboard workflows integrating LLM-based mission planning, route optimisation and simulated telemetry, maintaining consistent mission data across pages.
- Explained system design and operational trade-offs to a multidisciplinary judging panel, winning **1st Place among 56 international engineering teams**.

AI for Inclusive Recruitment — AMS Business Challenge | Mar 2026

- Analysed recruitment data pipelines to identify sources of algorithmic bias and downstream decision risk.
- Translated a business problem into technical requirements and practical recommendations, presenting data risks and system trade-offs to a cross-functional panel.

Chandrayaan-3 Lunar Trajectory Modelling | 2024

- Modelled lunar trajectory dynamics using linear algebra, gravitational-vector analysis and multi-variable physics.

Independent Trading Strategy Research & Backtesting

- Spent 30 days studying market behaviour and risk before developing and backtesting a rule-based trading strategy over a further 30 days.
- Refined entry, exit and risk-management rules by separating repeatable signals from noise and evaluating decision quality independently from short-term outcomes.
- Progressed to simulated/prop-firm trading, strengthening my understanding of probabilistic thinking, uncertainty and disciplined risk-taking.

Professional Experience

Talisma Corporation Private Limited — AI/ML Intern | Jul 2024–Aug 2024

- Worked with consulting and technical teams to translate organisational requirements into structured, data-driven technical specifications.
- Evaluated software publishing and project-delivery workflows to identify data-quality issues and their impact on downstream delivery.
- Gained exposure to enterprise software development, requirements analysis and cross-functional problem-solving.

Waterlabs AI — Software Intern | Oct 2023

- Worked within a cross-functional healthcare automation team, gaining exposure to the software-development lifecycle.
- Analysed healthcare workflows and supporting data to identify inefficiencies and understand how software could address operational requirements.

Skills & Courses

Languages & Tools: Python, SQL, Java, TypeScript, React, C, Git/GitHub, FastAPI, REST APIs, WebSockets, Excel, PowerPoint
Courses & Simulations: CS50x — Harvard | Machine Learning Specialisation — Stanford Online & DeepLearning.AI | Tata Data Visualisation Job Simulation — Forage.
Interests: Applied AI, data analytics, software engineering and technology consulting.
